**Max Levy Goes Green**

Max Levy Autograph, Inc. proudly announces the move to our new state of the art high energy efficiency "green" 3.2 acre campus location is now complete. "With the move of the Autograph from the W. Roberts Avenue facility, we have completed the transfer of the continuing operations to the new facility at 2710 Commerce Way in Northeast Philadelphia. We are pleased that we have been able to seamlessly support our customers and our continued growth throughout the incremental move," said Donald Sedberry, President of Max Levy.

The new facility is over 30,000 sq ft of modern engineering/manufacturing space. It is the first engineering/manufacturing facility to be erected in Philadelphia in the past 30 years and the first such "green" facility in Philadelphia.

The flagship building at 220 W. Roberts Avenue served the company since 1902, being the first pre-stressed concrete building to be built in Philadelphia with beams imported from France. The final disposition of this historical building is undecided.

Max Levy Autograph, Inc. is the world leader in the design and manufacture of precision patterned optics used in metrology, machine vision and mil aerospace systems. They also produce a line of patented/proprietary electronics
