E = Excellent G = Good F = Fair N/A = Not suitable for the FOV of this magnifier. (See notes for detail explanation)

- 1 For 15mm through 20mm field of view magnifiers, grid pattern in center is usable. Outer ring of circles is not easily viewable and should not be used when using 16mm through 20mm field of view magnifiers.
- 2 For 15mm through 20mm field of view magnifiers, starting "0" of scale is outside of the magnifier field of view. This does not limit the ability of the user to make measurements within the field of view of the magnifier.
- 3 For 15mm through 18mm field of view magnifiers, starting "0" of scale is outside of the magnifier field of view. This does not limit the ability of the user to make measurements within the field of view of the magnifier.
- 4 Numeral markings on outer edge of protractor with 15mm through 20mm field of view magnifiers may be partially or fully obscured when viewing perpendicular along the axis of the magnifier lens system. To see these numerals will usually require off axis viewing.
- 5 Hole diameters, outside radius markings and angels may be partially or fully obscured when using 15mm through 20mm field of view magnifiers.
- 6 Starting "0" of scale is in center. Full scale is only visible to the extent of the magnifier field of view for the 15mm through 20mm field of view magnifiers.
- 7 Holds on outer diameter of reticle are partially obscured on magnifiers with 20mm to 23mm field of view or less.
